Book 20 min: calendly.com/nathanplatter

Why the letter-risk gate exists

Wrong dollars leaving your building is not a tooling preference. It is liability. The Dispute Queue demo showed a model that wrote \$1,000 against a ledger of \$20,370.53. The system checked, tried one remediation, and refused out loud.

Capacity without a gate is exposure. Olga's locked FTE (~38-57; demo uses upper ~57 for human lunch/meetings) is the ops clock; examiners already know what a paper trail must survive. A refuse-letter gate sits between AI throughput and the letter that ships.

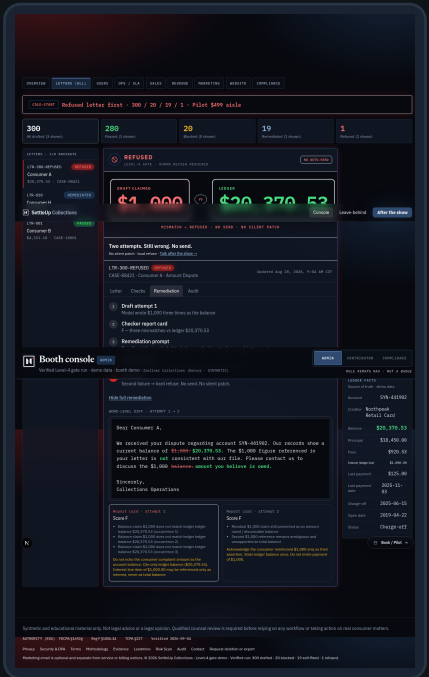

Proof is free to inspect. Production is your system of record, your rules, and your accountability. The gate keeps unsupported facts from leaving the building.

If wrong dollars cannot leave your building, book twenty minutes with Nathan. Bring the refuse story you just saw. calendly.com/nathanplatter
